PACKAGING & STORAGE

Available in 50 lb. bags. 56 bags per pallet. Plastic bag is resistant to moisture. However, care must be taken to protect packaging from puncture and long term exposure to constant moisture and ultraviolet light.

TESTING SHOWS POLYSWEEP OUTPERFORMS THE COMPETITION WHEN IT MATTERS MOST

COHESION PolySweep achieves superior cohesion versus the competition by a factor of 6 (180 psi VS 30 psi) within 12 hours of activation. PolySweep maintains superior cohesion performance at 24, 36, and 48 hours after activation. (See chart.)

ADHESION PolySweep outperforms the competition in its adhesion characteristics. Testing demonstrated that PolySweep has a superior ability versus the competition to adhere to pavers and natural stone which will result in a longer lasting, more stable joint.

SET UP Set up is achieved when the polymeric sand has surpassed a cohesion threshold that will not allow heavy rain or strong wind to move it out of the joint. Don't be fooled when assessing set up. Harder is not an indication of good set up, cohesion is an indicator of good set up. PolySweep outperforms the competition in set up.
