

PAVER CARE MULTI-SURFACE STAIN REMOVERS & CLEANERS

The importance of cleaning before sealing

When sealing new concrete pavers for the first time, it is essential to clean the surface in its entirety to prevent the formation of whitish efflorescence stains that could remain trapped under the sealer's protective film.

Older pavers are oftentimes stained with dirt, motor oil, grease, rust, and other organic residues.

That is why it is of utmost importance to clean these stains with the appropriate cleaner before applying any surface protector. Sealing dirty pavers will never give the intended results and might even compromise the longevity of the sealer.

Whether it's for the seasonal cleaning of pavers or the pre-seal preparation of a surface, Techniseal® offers an extensive line of stain removers and specialized cleaners for consistent high-end results.

THE TECHNISEAL® ADVANTAGE THE ULTIMATE CLEANING SYSTEM

CLEAN all existing stains (starting from the lowest point) to avoid trapping them under a protective sealer or limiting its effectiveness.

PREPARE the entire surface of concrete pavers to open up the pores for deeper penetration, better adhesion and added durability of a protective sealant.
