INSTALLATION NOTES

Standard Base – Min. 6" – 8" of ¾" Crusher Run gravel (any road base standard in accordance with ASTM-D2940) compacted to 98% Standard Proctor Density (SPD).

Levelling – Leveling fire pit kits directly on top of gravel is tedious and generally does not yield the best results. U-Grip™ Base units or universal base pads are recommended under all Unilock walls for improved accuracy and makes for a speedier installation. Additional benefits include long term structural integrity and an overall better appearance. Poured concrete leveling pads, reinforced with rebar, are also a great way to accomplish leveling, especially for larger installations. You must ensure that the concrete is poured and finished perfectly in order to achieve a good visual appearance.

Connection – Fire pit wall units must be glued using an appropriate high heat concrete adhesive for connection between units. Always read adhesive manufacturers' directions prior to gluing.

Handling – Handle wall units with care when installing. Bumping units into one another may chip the face.

Coping – No coping is required for the Sunset fire pit.
