Why Biodegradable Stakes

Biodegradable stakes are not only a more eco-friendly anchoring solution for erosion control matting and fabrics, but they are also a **safer option**.

Ecoduty stakes include soil-collecting ribs given them **3-5 times the holding power** of steel staples, preventing them from protruding out of the ground. This means your BMP stays anchored correctly.

Additionally, not having steel staples on a completed job site **eliminates a safety hazard and reduces liability** from a safer stake that will remain in the ground.

Useful lifespan is 24-36 months, after which the stakes will biodegrade into all natural by-products. Test results available on ecoturfmidwest.com
